1. Package Contents

Carefully unpack and remove the contents and contact your dealer immediately if any of the following item is missing or damaged :

- ☒ 56K PCI Analog Modem
- ☒ Telephone cable
- ☒ Quick Start Guide
- ☒ CD-Title with Windows' driver and user manual

2. Minimum System Requirement

- ☒ PC-based computer with Pentium III and above processor.
- ☒ One free PCI Bus slot.
- ☒ 64MB RAM or more.
- ☒ 20MB hard disk space (System files and modem drivers only).
- ☒ CD-ROM drive.
- ☒ Windows 98SE/ME/XP/2000 Operating System

3. Panel Descriptions

■ Back Panel :

LINE	RJ-11 jack connecting to Telephone Line.
PHONE	RJ-11 jack connecting to Telephone set.

4. Hardware Installation

1. Turn off your computer.
2. Open the case of your PC and plug the 56K PCI Modem card into a free PCI slot on your motherboard.
3. Fix the 56K PCI Modem card onto your case and then close your computer case.
4. Unplug the telephone line from the wall socket, then plug the telephone line into the socket on the back of the modem marked **PHONE**.
5. Plug the phone cord supplied into the socket on the back of the modem marked **LINE** then Plug the other end of the cord into the wall socket.
6. Power on your computer.
7. This completes the setting up of your modem hardware. Please proceed to the next section for information on **installing the modem drivers** in Windows 98SE/ME/XP/2000.

NOTE : You need to have an account from an Internet service provider in order to connect to Internet.

5. Installing The Modem Drivers

A. Windows 98:

■ Driver Installation :

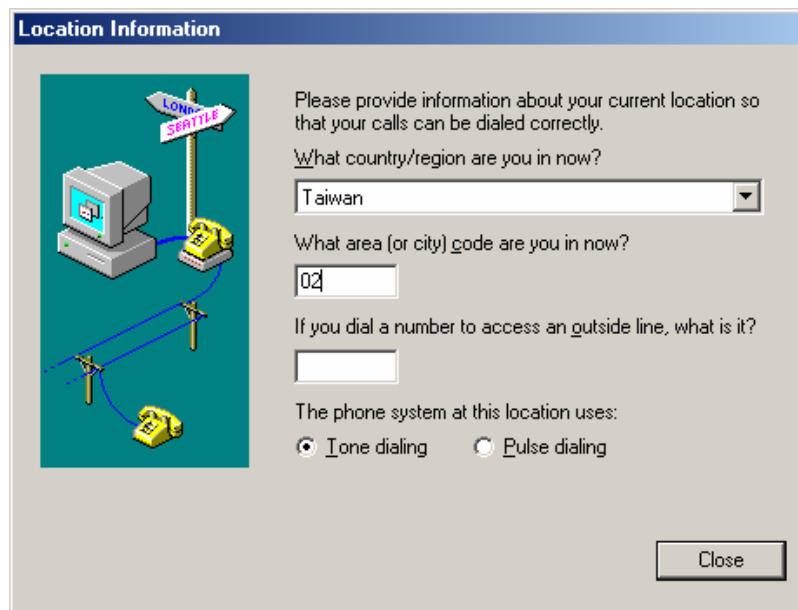

1. Power on your computer to start Windows 98. Windows 98 will detect the newly-installed modem and a “Add New Hardware Wizard” window will appear. Click “**Cancel**” to close the hardware wizard, then place your Driver CD into the CD-ROM drive.

2. Windows system will automatically install the device driver and copy all the necessary files to your system. An “Under Installation, please wait ..” icon will appear indicates the files copying process.

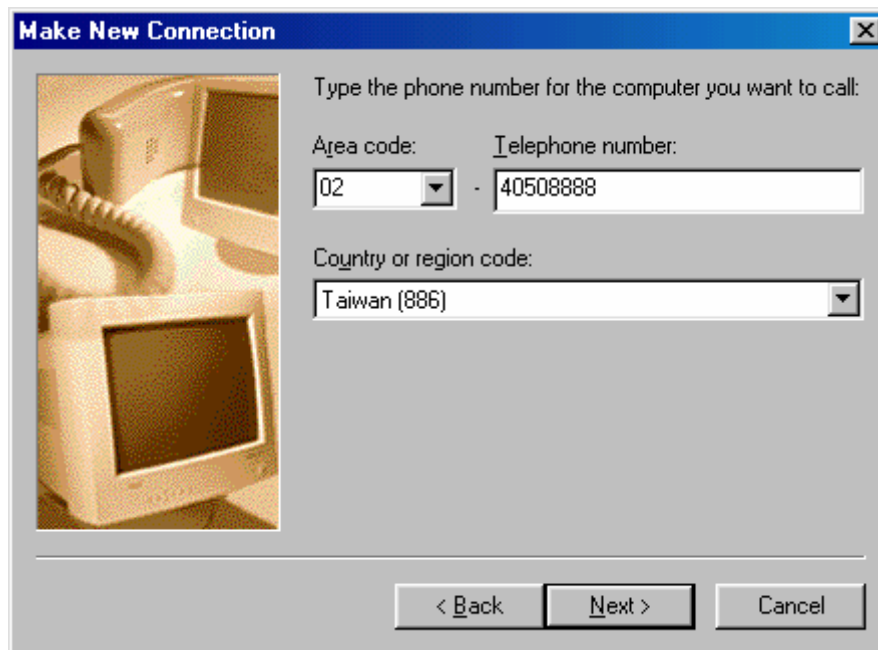

3. A “**Location Information**” wizard will pop-up. Fill in your location information then click “**Close**” to continue.

4. A “**Make New Connection**” wizard will pop-up during the driver installation process. Manually enter a name for the computer you are dialing then click “**Next**” to continue.

5. Manually enter the phone number to dial then click **“Next”** to continue. Check your ISP for the correct phone number and setting.

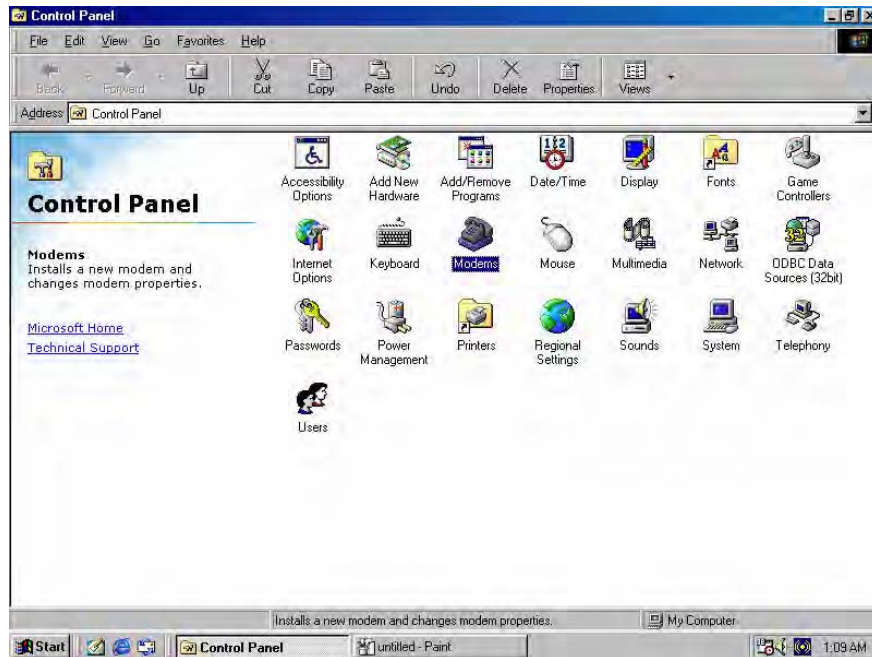

6. The Setup Wizard will ask you to review your settings before it starts to copy necessary files to your system. Click **“Finish”** if you are confirmed with your setting, or click **“Back”** to make any necessary changes.

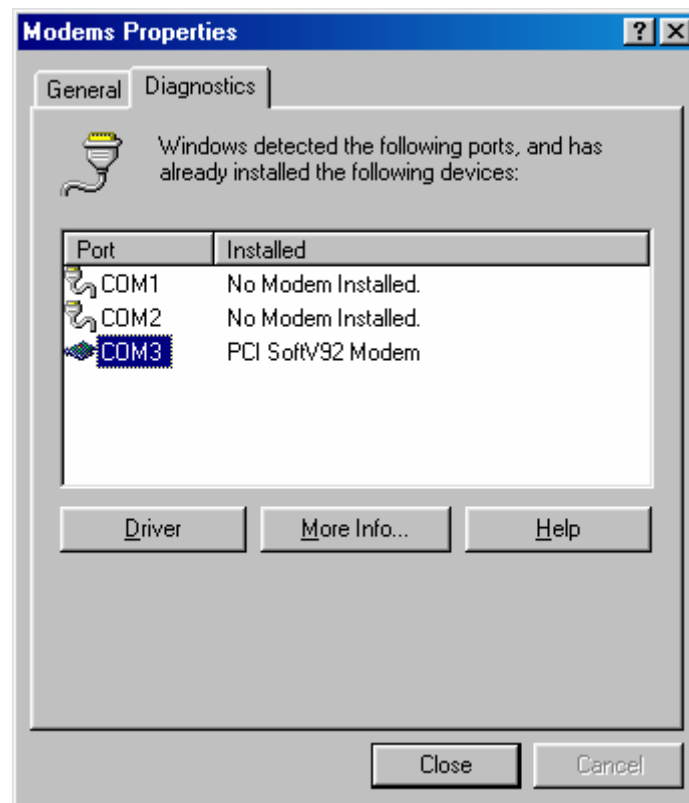

7. An “**Install Finish !!**” wizard will pop-up. Click “**OK**” to complete the Auto Installation process.

8. Move your cursor as following sequence: “**Start**” → “**Settings**” → “**Control Panel**” and double click on the “**Modem**” icon.

9. The following window will pop-up. Click the **“Diagnostics”** tab and select the **“PCI SoftV92 Modem”** from the list then click **“More Info..”**.

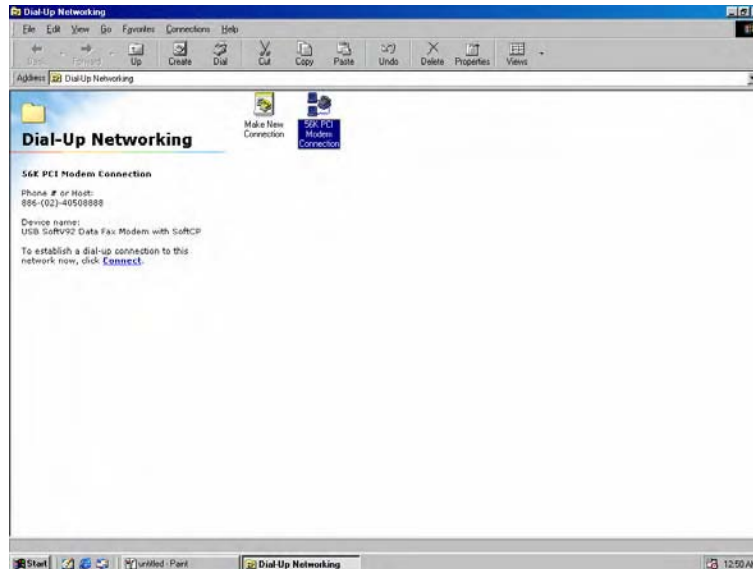

10. The following window will pop-up. The PCI modem will responding to AT command set if the driver is properly installed and functioning correctly. Click **“OK”** to close the diagnostic process.

■ Making sure of Internet connection

1. Move your cursor as following sequence: “**Start**” → “**Programs**” → “**Accessories**” → “**Communications**” → “**Dial-Up Networking**”. The following window will pop-up. Double click on the “**56K PCI Modem Connection**” icon.

2. The following window will pop-up. Manually enter your “**User name**” and “**Password**” which provided by your ISP, then click “**Connect**”.

3. The following connection and authentication icon will pop-up.

4. Launch your web browser, and enter the Google Web Address: “**www.google.com**” in the address field then press “**Enter**”. The following Google website index page will display on your screen. This shows your 56K Modem connection is correctly set and access to the Internet is now available.

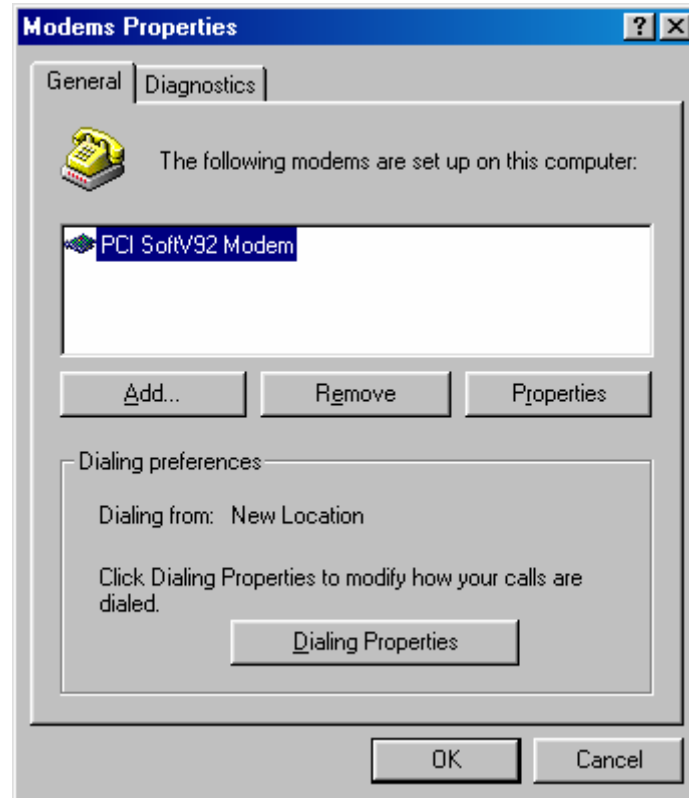

5. Once you have successfully connected to the Internet, a connected icon will automatically appear in your Windows System task bar. This icon will light up when receiving or transmitting data from or to the Internet. Double-click the connection icon and the following window will be shown. Click “**Disconnect**” tab to end up the Internet connection.

■ Uninstalling the Driver

1. To uninstall the 56K Modem from your system, click **“Start”** → **“Settings”** → **“Control Panel”** and double click on the **“Modems”** icon. The following window will pop-up. Click **“Remove”** tab. The uninstall wizard will guide you and remove all the necessary files from your system.

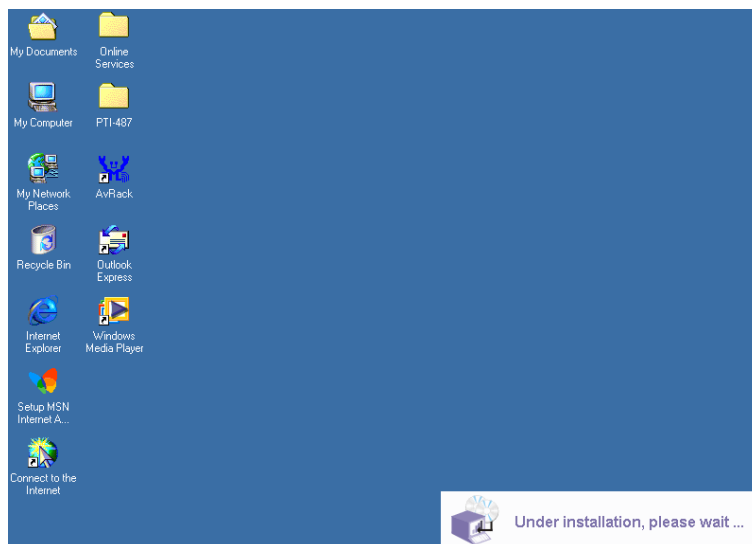

B. Windows ME:

■ Driver Installation :

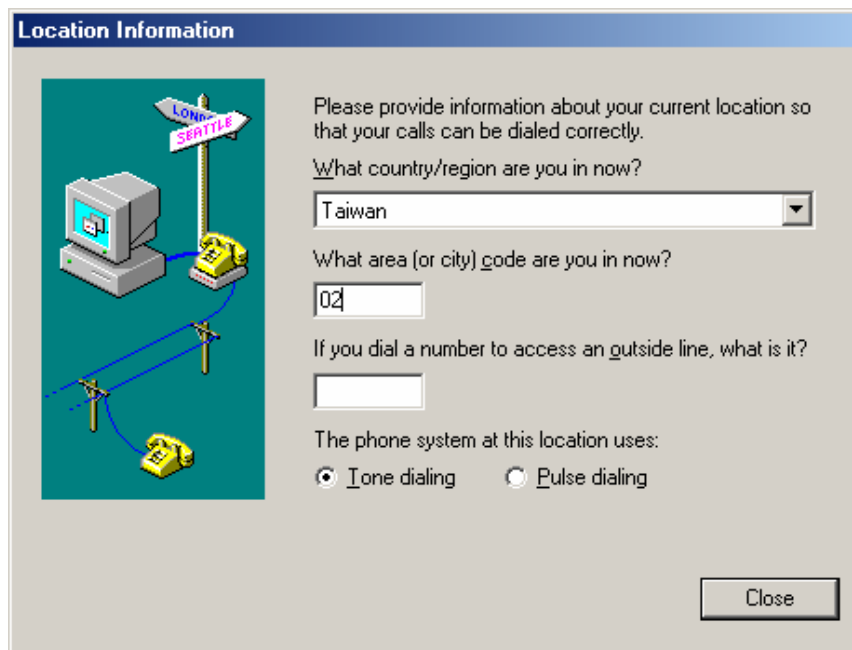

1. Power on your computer to start Windows ME. Windows ME will detect the newly-installed modem and a “Add New Hardware Wizard” window will appear. Click “**Cancel**” to close the hardware wizard, then place your Driver CD into the CD-ROM drive.

2. Windows system will automatically install the device driver and copy all the necessary files to your system. An “Under Installation, please wait ..” icon will appear indicates the files copying process.

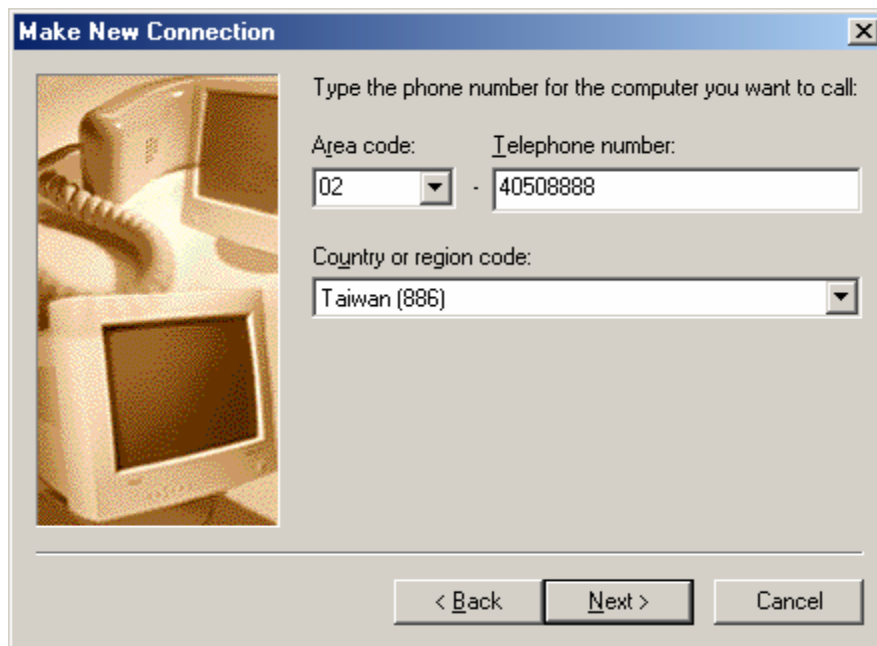

3. A “**Location Information**” wizard will pop-up. Fill in your location information then click “**Close**” to continue.

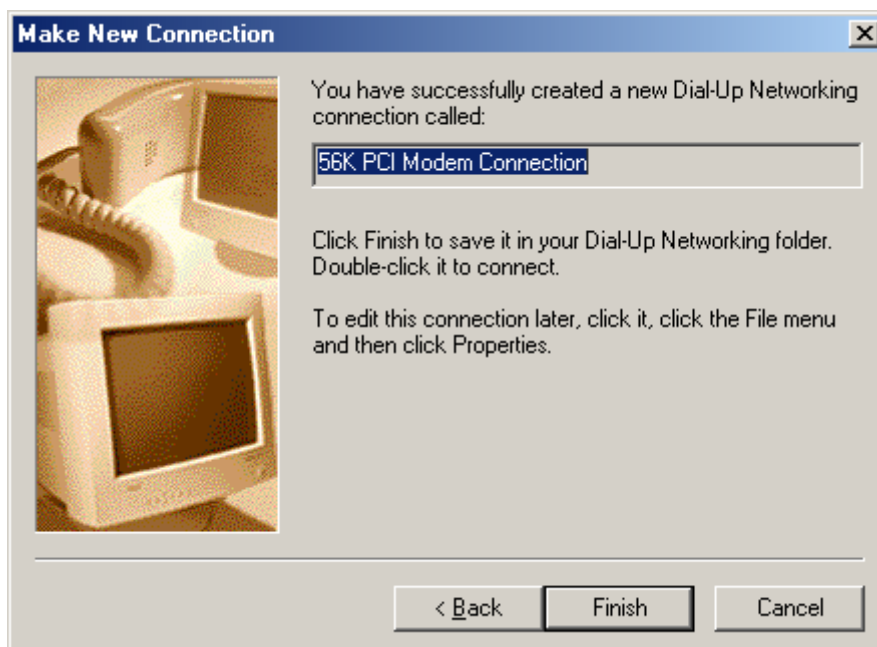

4. A “**Make New Connection**” wizard will pop-up during the driver installation process. Manually enter a name for the computer you are going to dial then click “**Next**” to continue.

5. Manually enter the phone number to dial then click **“Next”** to continue. Check your ISP for the correct phone number and setting.

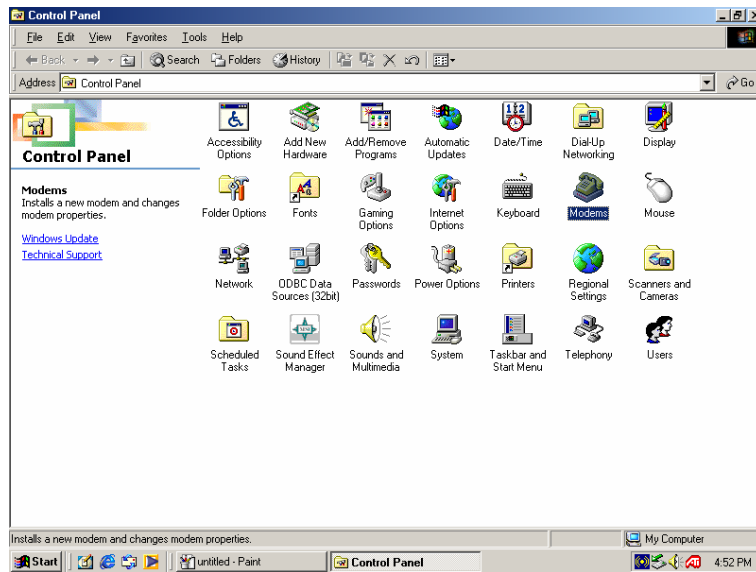

6. The Setup Wizard will ask you to review your settings before it starts to copy necessary files to your system. Click **“Finish”** if you are confirmed with your setting, or click **“Back”** to make any necessary changes.

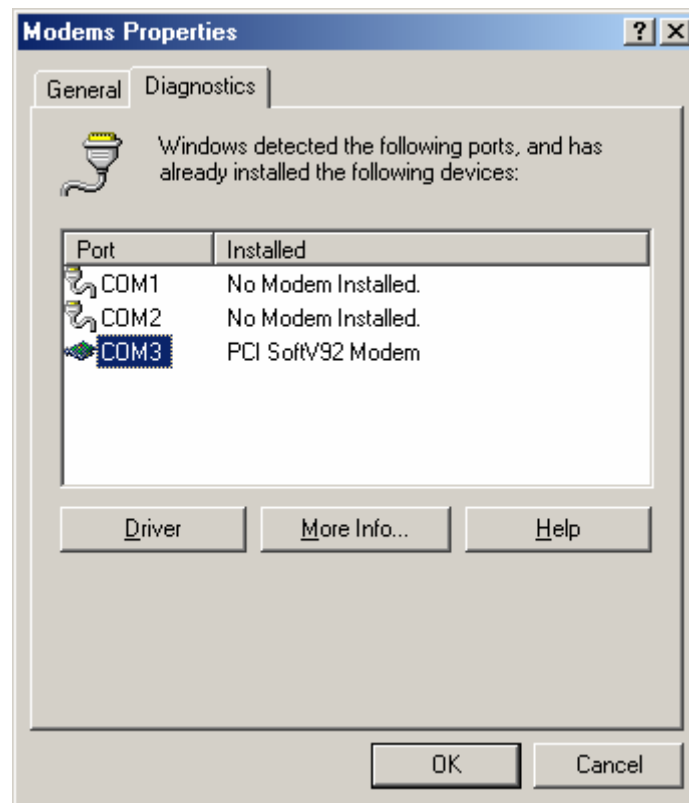

7. An “**Install Finish !!**” wizard will pop-up. Click “**OK**” to complete the Auto Installation process.

8. Move your cursor as following sequence: “**Start**” → “**Settings**” → “**Control Panel**” and double click on the “**Modem**” icon.

9. The following window will pop-up. Click the **“Diagnostics”** tab and select the **“PCI SoftV92 Modem”** from the list then click **“More Info..”**.

10. The following window will pop-up. The PCI modem will responding to AT command set if the driver is properly installed and functioning correctly. Click **“OK”** to close the diagnostic process.

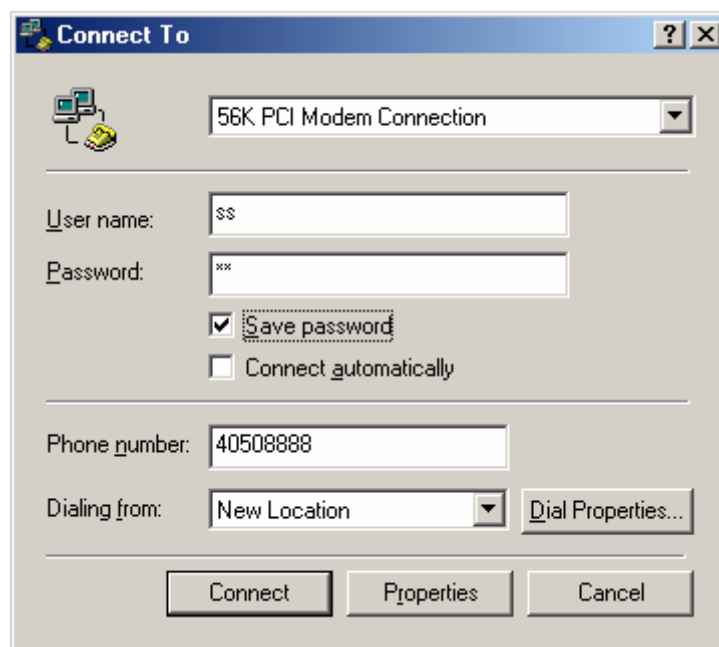

■ Making sure of Internet connection

1. Move your cursor as following sequence: **“Start”** → **“Programs”** → **“Accessories”** → **“Communications”** → **“Dial-Up Networking”**. The following window will pop-up. Double click on the **“56K PCI Modem Connection”** icon.

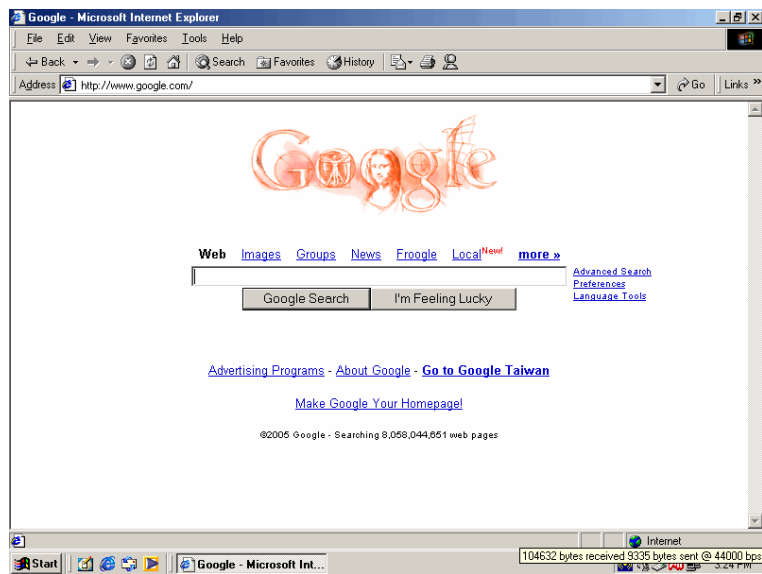

2. The following window will pop-up. Manually enter your **“User name”** and **“Password”** which provided by your ISP, then click **“Connect”**.

3. The following connection and authentication icon will pop-up.

4. Launch your web browser, and enter the Google Web Address: “**www.google.com**” in the address field then press “**Enter**”. The following Google website index page will display on your screen. This shows your 56K Modem connection is correctly set and access to the Internet is now available.

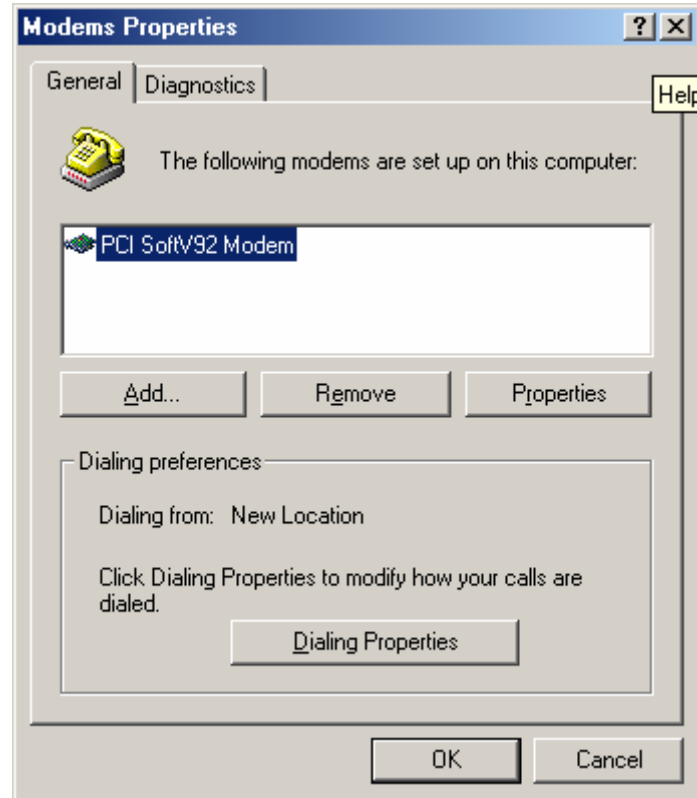

5. Once you have successful connected to the Internet, a connected icon will automatically appears in you Window System task bar. This icon will lit when receiving or transmitting data from or to the Internet. Double click the connection icon and the following window will be shown. Click “**Disconnect**” tab to end up the Internet connection.

■ Uninstalling the Driver

1. To uninstall the 56K Modem from your system, click **“Start”** → **“Settings”** → **“Control Panel”** and double click on the **“Modems”** icon. The following window will pop-up. Click **“Remove”** tab. The uninstall wizard will guide you and remove all the necessary files from your system.

C. Windows XP :

■ Driver Installation :

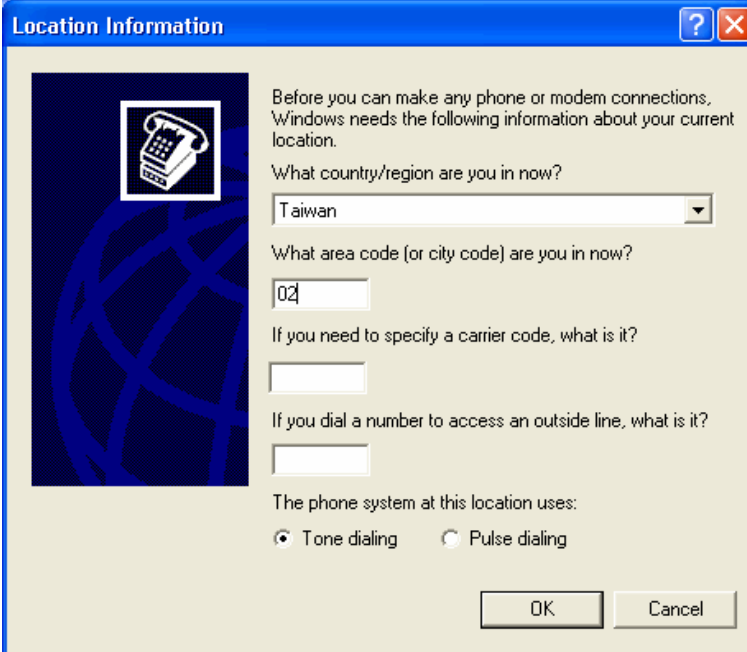

1. Power on your computer to start Windows XP. Windows XP will detect the newly-installed modem and a **“Found New Hardware Wizard”** window will appear. Click **“Cancel”** to close the hardware wizard, then place your Driver CD into the CD-ROM drive.

2. Windows system will automatically install the device driver and copy all the necessary files to your system. An **“Under Installation, please wait ..”** icon will appear indicates the files copying process.

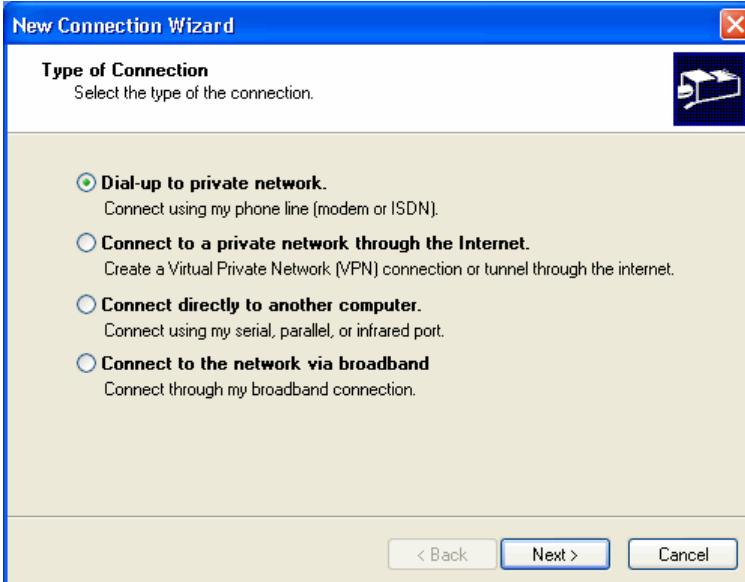

3. A “**Location Information**” window will pop-up. Follow the instruction and manually fill in all the necessary items then click “**OK**” to continue.

The "Location Information" dialog box is shown. It has a blue title bar with the text "Location Information" and standard window controls. The main area has a light beige background. On the left is a dark blue square with a white telephone icon and a globe pattern. To the right of this icon, the text reads: "Before you can make any phone or modem connections, Windows needs the following information about your current location." Below this, there are four input fields: a dropdown menu for "What country/region are you in now?" with "Taiwan" selected; a text box for "What area code (or city code) are you in now?" containing "02"; an empty text box for "If you need to specify a carrier code, what is it?"; and another empty text box for "If you dial a number to access an outside line, what is it?". Below these fields, it says "The phone system at this location uses:" followed by two radio buttons: "Tone dialing" (which is selected) and "Pulse dialing". At the bottom right are "OK" and "Cancel" buttons.

4. A “**New Connection Wizard**” will pop-up during the driver installation process. Click “**Dial-up to private network**” then click “**Next**” to continue.

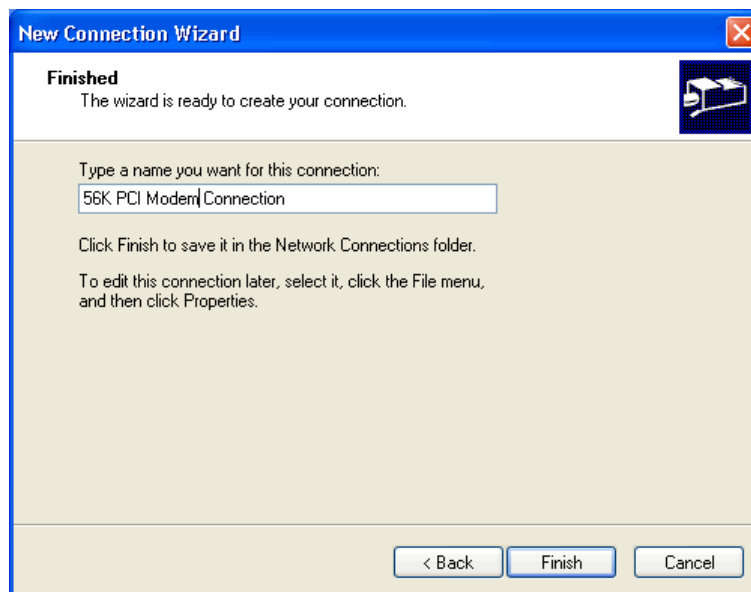

The "New Connection Wizard" dialog box is shown. It has a blue title bar with the text "New Connection Wizard" and standard window controls. The main area has a light beige background. At the top, it says "Type of Connection" and "Select the type of the connection." with a small icon of a computer and a network cable. Below this, there are four radio button options: "Dial-up to private network." (selected), "Connect to a private network through the Internet.", "Connect directly to another computer.", and "Connect to the network via broadband". Each option has a brief description below it. At the bottom right are "< Back", "Next >", and "Cancel" buttons.

5. Manually enter the phone number to dial then click **“Next”** to continue. Check your ISP for the correct phone number and setting.

6. Type a name you want for this connection then click **“Finish”**.

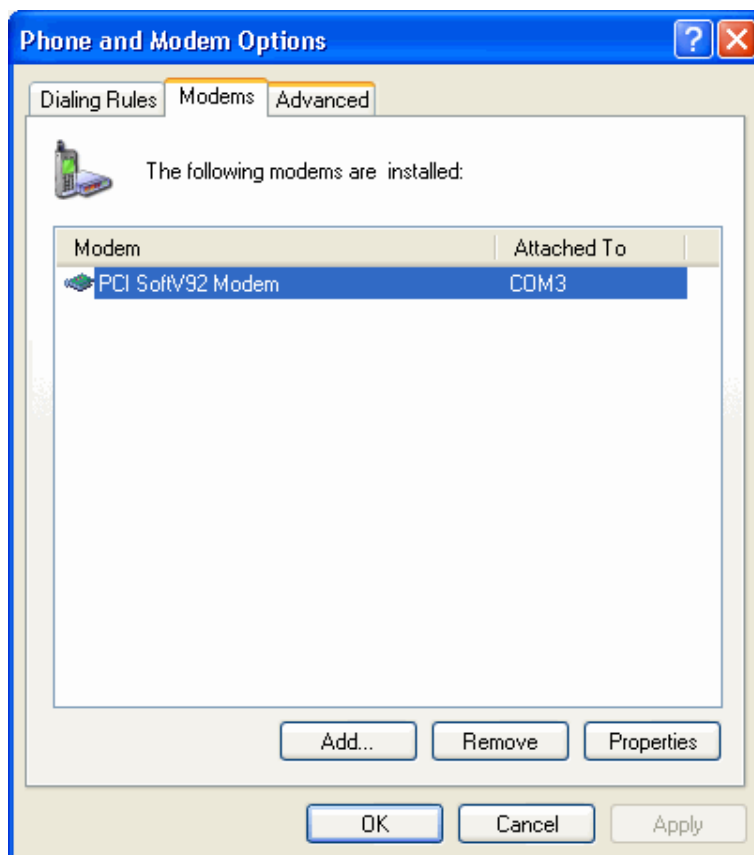

7. An **“Install Finish !!”** wizard will pop-up. Click **“OK”** to complete the Auto Installation process.

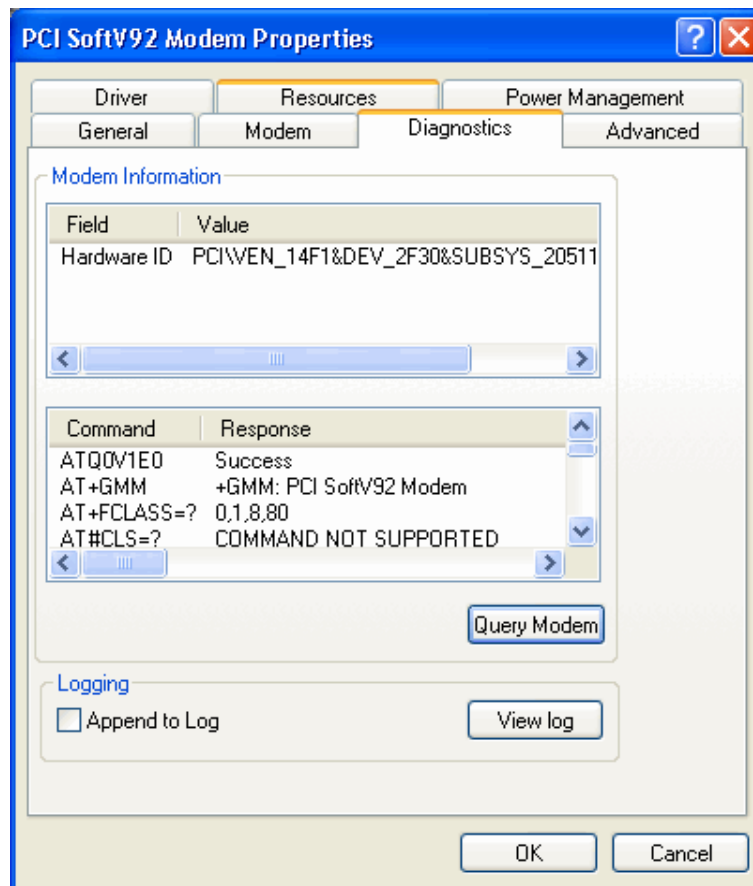

8. Move your cursor as following sequence: **“Start”** → **“Settings”** → **“Control Panel”** and click **“Phone and Modem Options”**.

9. The following window will pop-up. Click the **“Modems”** tab and select **“PCI SoftV92 Modem”** from the list then click **“Properties”**.

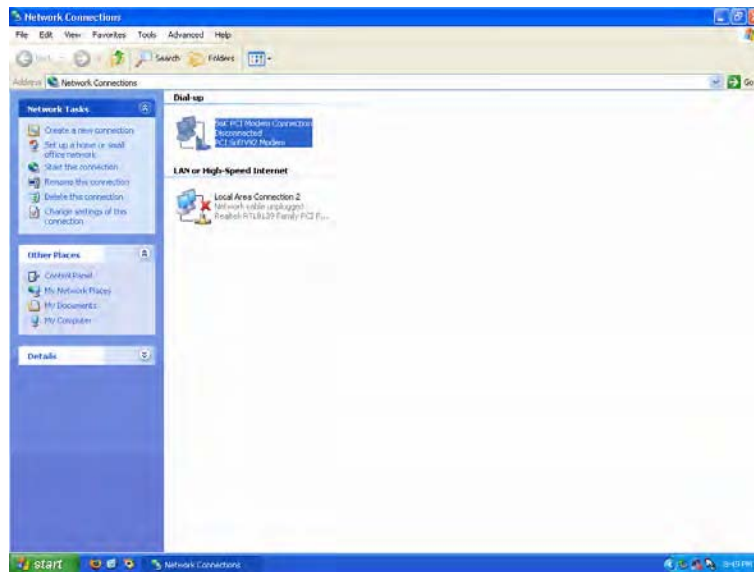

10. The following window will pop-up. Click the **“Diagnostics”** tab then click **“Query Modem”**. The PCI modem will responding to AT command set if the driver is properly installed and functioning correctly. Click **“OK”** to close the diagnostic process.

■ Making sure of Internet connection

1. Move your cursor as following sequence: **“Start”** → **“Settings”** → **“Network Connections”** then click on **“56K PCI Modem Connection”**.

2. The following window will pop-up. Manually enter your “**User name**” and “**Password**” which provided by your ISP, then click “**Dial**”.

3. The following connection and authentication icon will pop-up.

4. Launch your web browser, and enter the Google Web Address: “**www.google.com**” in the address field then press “**Enter**”. The following Google website index page will display on your screen. This shows your 56K Modem connection is correctly set and access to the Internet is now available.

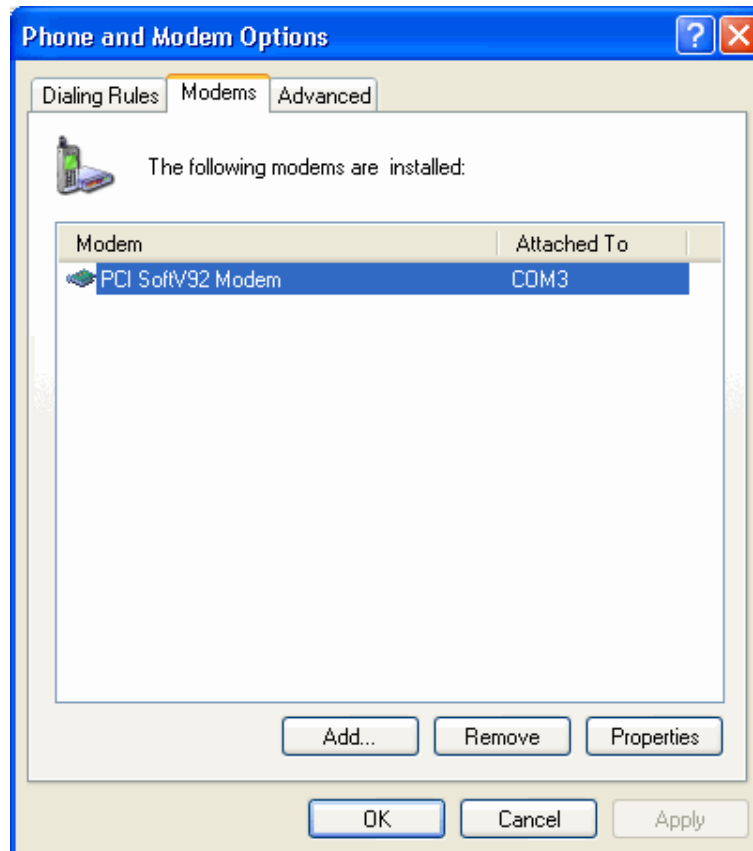

5. Once you have successfully connected to the Internet, a connected icon will automatically appear in your Windows System task bar. This icon will light up when receiving or transmitting data from or to the Internet. Double-click the connection icon and the following window will be shown. Click “**Disconnect**” tab to end up the Internet connection.

■ Uninstalling the Driver

1. To uninstall the 56K Modem from your system, click **“Start”** → **“Settings”** → **“Control Panel”** → **“Phone and Modem Options”**. The following window will pop-up. Click **“Modems”** tab and select the modem type from the list then click **“Remove”**. The uninstall wizard will guide you and remove all the necessary files from your system.

D. Windows 2000 :

■ Driver Installation :

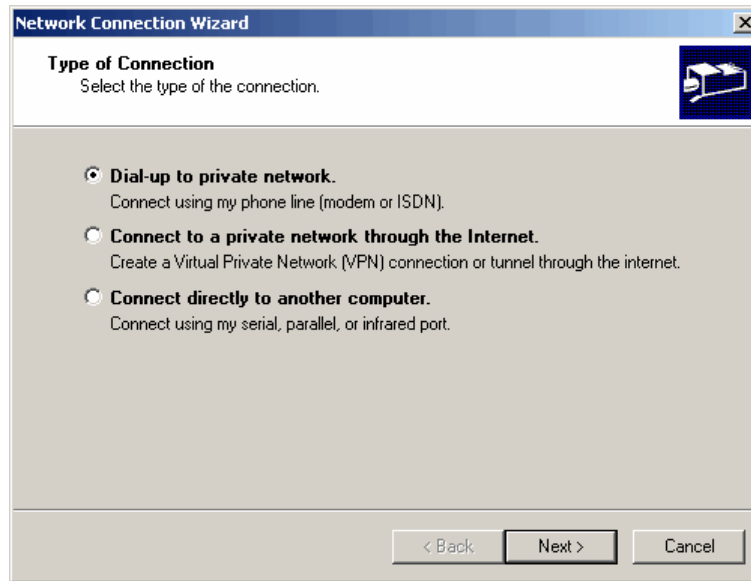

1. Power on your computer to start Windows 2000. Windows 2000 will detect the newly-installed modem and a “**Found New Hardware Wizard**” window will appear. Click “**Cancel**” to close the hardware wizard, then place your Driver CD into the CD-ROM drive.

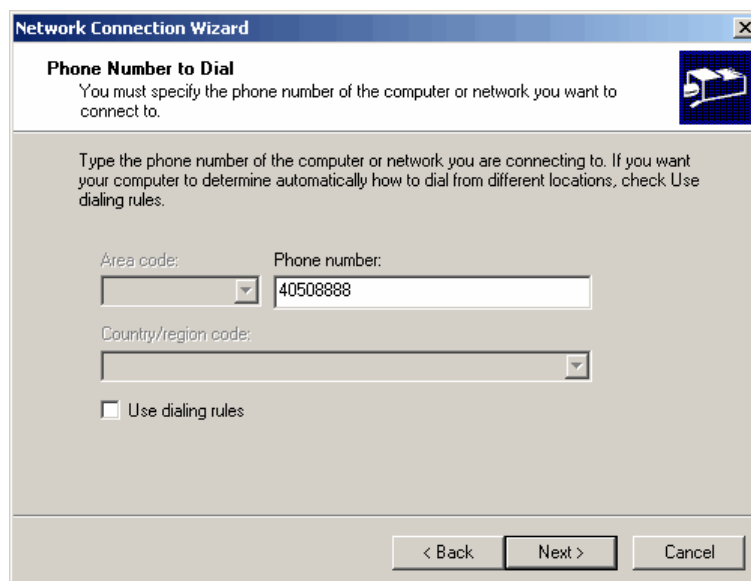

2. Windows system will automatically install the device driver and copy all the necessary files to your system. An “**Under Installation, please wait ..**” icon will appear indicates the files copying process.

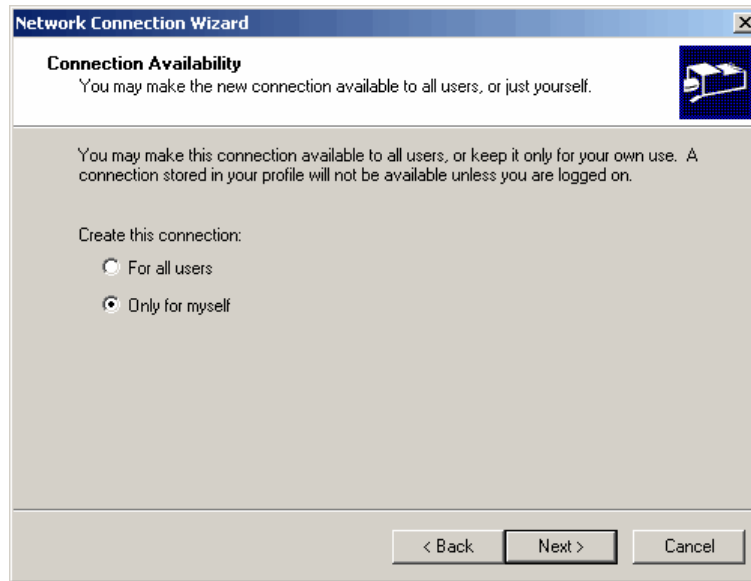

3. A “**Network Connection Wizard**” will pop-up during the driver installation process. Click “**Dial-up to private network**” then click “**Next**” to continue.

4. Manually enter the phone number to dial then click “**Next**” to continue. Check your ISP for the correct phone number and setting.

5. You may make this connection available for all users, or keep it only for your own use. Select **“For all users”** or **“Only for myself”** then click **“Next”** to continue.

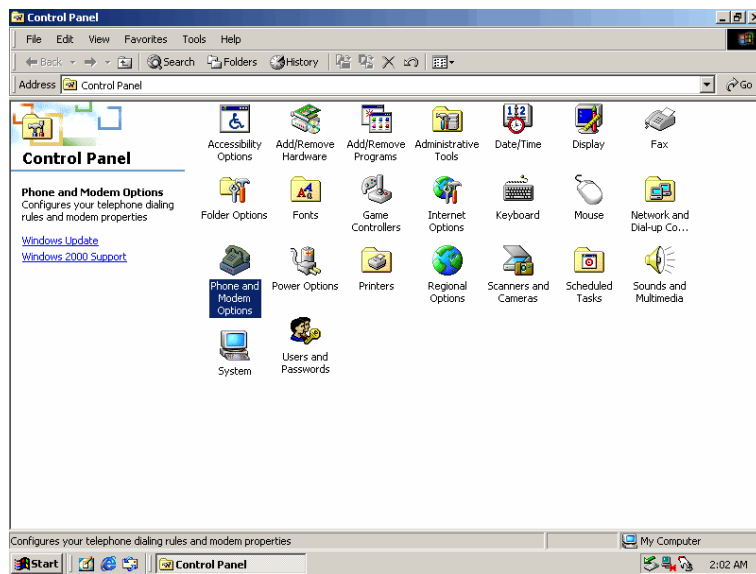

6. Type a name you want for this connection then click **“Finish”**.

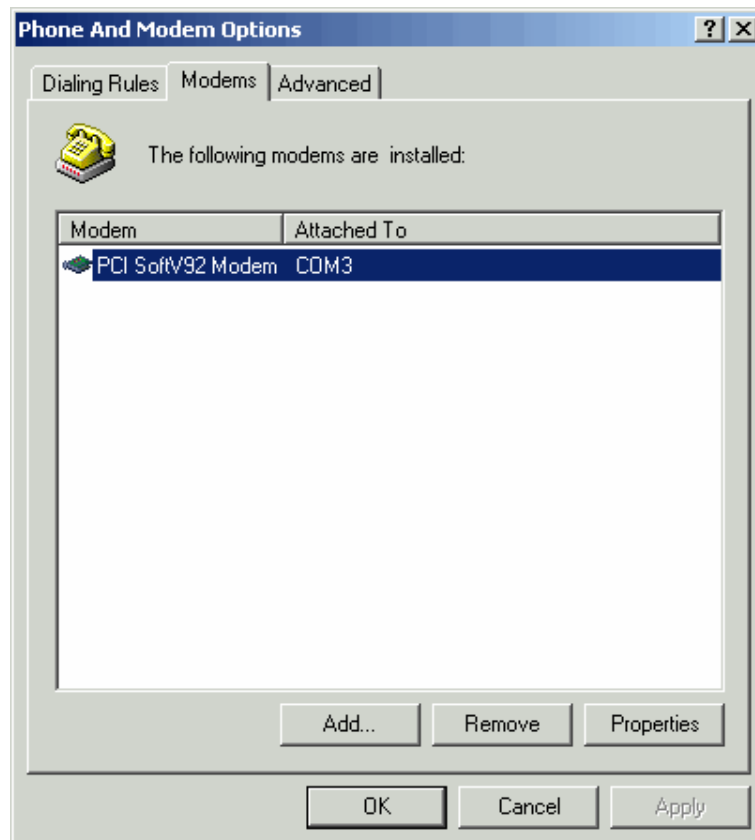

7. An “**Install Finish !!**” wizard will pop-up. Click “**OK**” to complete the Auto Installation process.

8. Move your cursor as following sequence: “**Start**” → “**Settings**” → “**Control Panel**” and click “**Phone and Modem Options**”.

9. The following window will pop-up. Click the **“Modems”** tab and select **“PCI SoftV92 Modem”** from the list then click **“Properties”**.

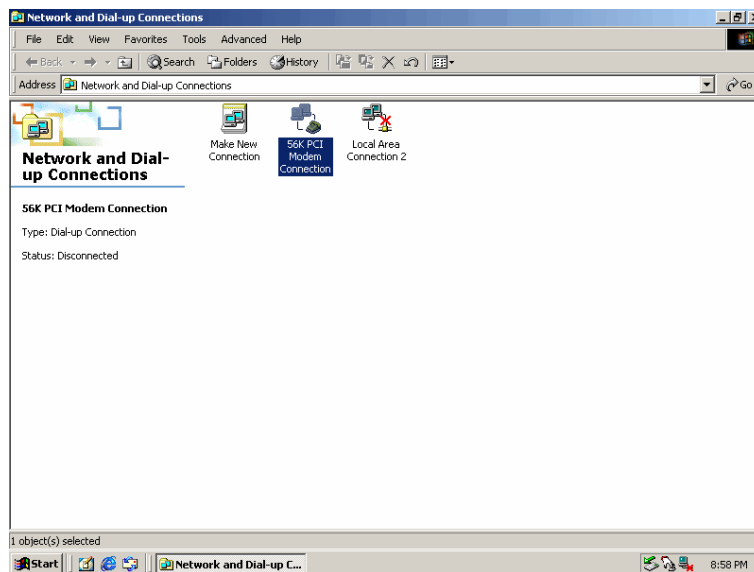

10. The following window will pop-up. Click the **“Diagnostics”** tab then click **“Query Modem”**. The PCI modem will responding to AT command set if the driver is properly installed and functioning correctly. Click **“OK”** to close the diagnostic process.

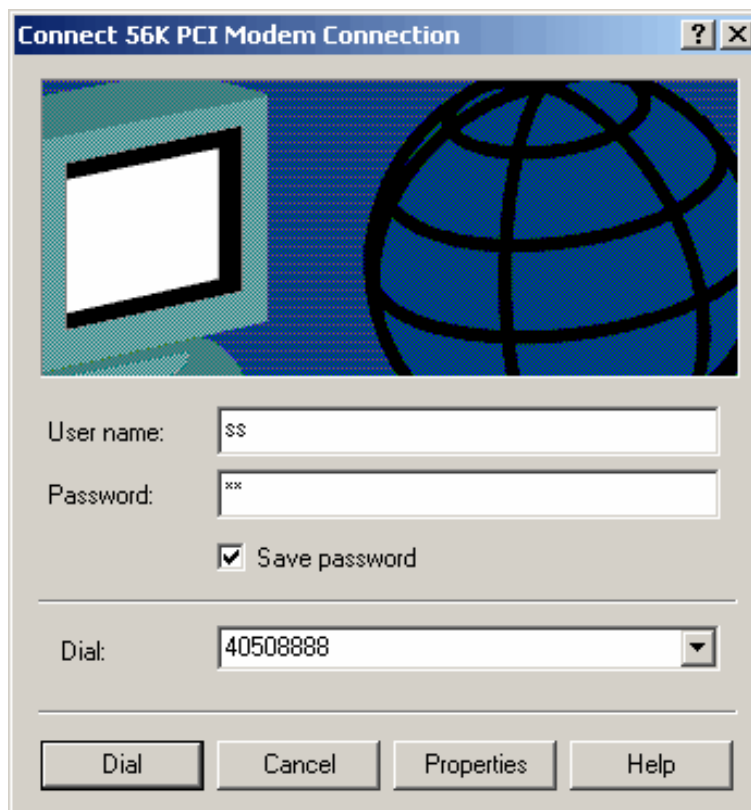

■ Making sure of Internet connection

1. Move your cursor as following sequence: **“Start”** → **“Settings”** → **“Network and Dial-up Connections”** then click on **“56K PCI Modem Connection”**.

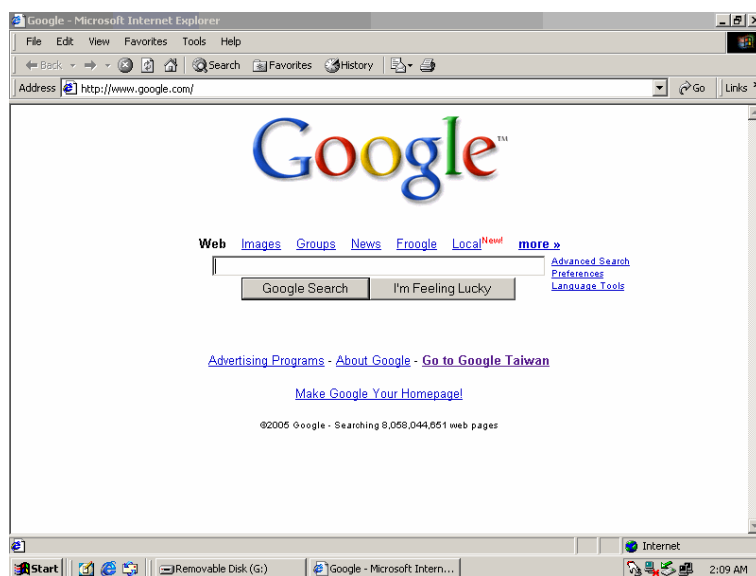

2. The following window will pop-up. Manually enter your **“User name”** and **“Password”** which provided by your ISP, then click **“Dial”**.

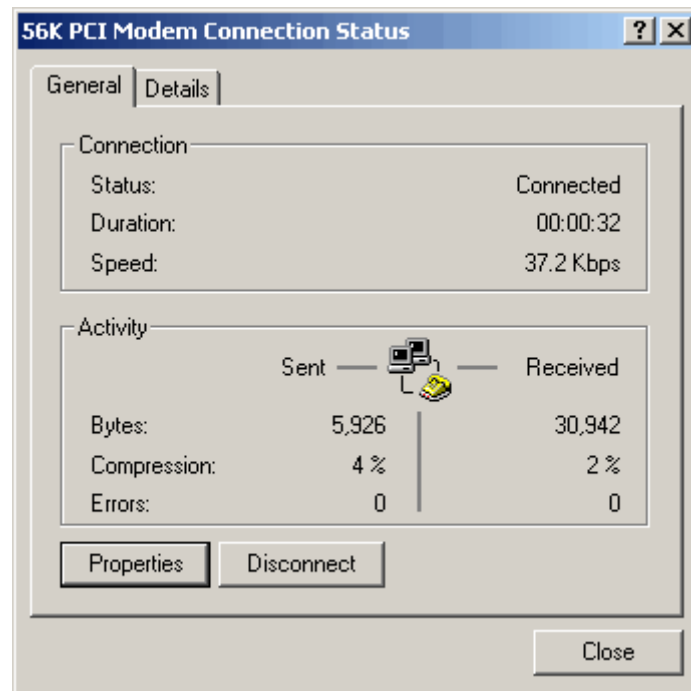

3. The following connection and authentication icon will pop-up.

4. Launch your web browser, and enter the Google Web Address: “**www.google.com**” in the address field then press “**Enter**”. The following Google website index page will display on your screen. This shows your 56K Modem connection is correctly set and access to the Internet is now available.

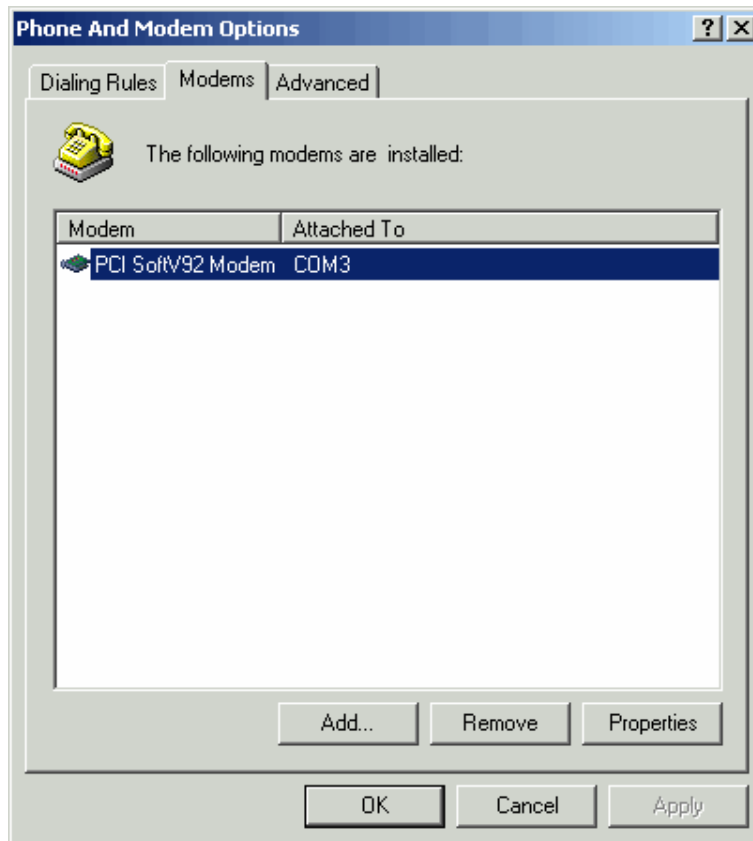

5. Once you have successfully connected to the Internet, a connected icon will automatically appear in your Windows System task bar. This icon will lit when receiving or transmitting data from or to the Internet. Double click the connection icon and the following window will be shown. Click **“Disconnect”** tab to end up the Internet connection.

■ Uninstalling the Driver

1. To uninstall the 56K Modem from your system, click **“Start” → “Settings” → “Control Panel” → “Phone and Modem Options”**. The following window will pop-up. Click **“Modems”** tab and select the modem type from the list then click **“Remove”**. The uninstall wizard will guide you and remove all the necessary files from your system.

6. Troubleshooting :

☑ **Windows doesn't detect Modem**

1. Check whether the Modem is plug into a proper extension slot.
2. Check whether the PCI slot is enable in the BIOS. Consult on the manual of the motherboard.
3. Check the manual of your motherboard and plug the modem into a universal 33MHz PCI slot.

☑ **There is no dial tone**

1. Ensure that the telephone cable is securely connected at both ends.
2. Ensure the telephone cable is plugged into the correct jack on the modem.
3. Unplug the telephone line cable from the computer, and connect it directly to a telephone from the wall outlet. Check for a dial tone. If there is none, the problem is in the telephone line or system. Call the service provider.
4. Check whether the Modem driver is properly installed.

☑ **Modem is calling, but no connection is established**

1. Call again later.
2. Try the direct outgoing line to ensure proper telephone service.
3. Check the number you are dialing is correct.
4. Your ISP is busy. Try to call again later.

☑ **Error report of "No Dial-tone"**

1. Wait until the telephone line is free.
2. Test the telephone line with an ordinary phone set to ensure the line is in service.

☑ **The modem disconnects during a connection**

1. Ensure that the telephone cable is securely connected at both ends.
2. Ensure that call-waiting is disabled.
3. Another phone extension in the house might have been picked up.

☑ **Data is not transmitted or received for unusually long periods of time**

1. Re-dial the call. (The telephone line connection may be poor.)
2. Try another ISP number, the server could be busy.
